Abstract (en)
[origin: WO2005028041A1] The invention relates to a device for transporting a pair of skis. More specifically, the invention relates to a device which can be used to transport a pair of skis side-by-side with or without poles by hand, on the shoulder or using a shoulder strap. The inventive device comprises: a sheet of nylon fabric (7) (Fig. 1) which contains a piece of polyethylene foam, a carrying handle (1), and rapid-fastening clips (4, 8) which are designed to receive a shoulder strap. According to the invention, a system of straps (2 and 9) and cords (5 and 6) are used to tie the device around the skis and poles and to ensure that the device remains closed with the aid of Velcro strips (3 and 10). The shoulder strap of the device comprises: one main nylon strap, two smaller straps, rapid-fastening clips, and an elastic band in the form of a lasso which surrounds the skis and poles and which is hooked to a plastic ball. The aforementioned elastic band maintains the skis in the vertical position. The inventive device is particularly suitable for carrying skis and poles.
