Abstract (en)
[origin: WO2005028132A1] The invention relates to a method for the generation of a cleaning agent foam, whereby a cleaning fluid has a chemical introduced by means of an injector (22) and, additionally, air is added by means of a foaming nozzle (34). According to the invention, the method can be further developed such that an effective cleaning agent foam can be generated with a reduced chemical proportion, whereby the cleaning agent/chemical mixture is supplied to the foaming nozzle (34) at a pressure of at least approx. 30 bar. Furthermore, an injector (22) and a foam generation system (10) for carrying out the method are disclosed.
