Abstract (en)  
[origin: US2007026773A1] The tool according to the invention has a variable loading of working means ( 3 - 6 ). The total set of working means ( 3 - 6 ) is divided into subsets, which, with respect to the direction of rotation ( 18 ), have different working angles ( 15, 16, 17 ). By changing the height ( 35 ) of subregions ( 23 - 28 ) of the base plate ( 1 ) of the tool, the free length of the working means ( 3 - 6 ) can also be varied. A single tool can be built, which combines several working functions and working properties in one tool. (FIG. 2 )
