Abstract (en)
[origin: WO2005040467A1] The driven delivery roller of a drafting machine for spinning machines is associated with two press cylinders which form two successive nip lines together with the delivery roller. The already drafted fibre composite passes through a compression area between said nip lines. Said compression area is provided with guiding walls which guide the fibre connection. Said guiding walls can be embodied as condensers provided with a V-shaped guide channel.
