Abstract (en)  
[origin: FR2858344A1] The block has four cores for allowing the passage of air flow that comes from outside the block into a building. Tenons and lateral mortises are provided for dry mounting of the block. Each core is vertical in the assembling position of the block and the central core among the cores is normally blocked to increase a heavy part of the block. An independent claim is also included for a bio-climatic wall of a building.
