Abstract (en)

[origin: EP1518976A1] The stake has anchoring clamps (28) having an end mounted on clamps support for being deployable by an axial traction exerted by an actuating mechanism (66) in a direction opposite to a depression direction. The mechanism is connected with the support by a bayonet connection. A tube (14) has a wall (26) with two openings (30) whose geometry causes the deployment of the clamps along a length of the tube in a traction direction.
