Abstract (en)
   [origin: WO2005024237A1] The invention relates to a rotating piston machine (1) comprising a drive part (17) which is driven by means of an electric motor and a driven part (10), said parts being provided with teeth on the front side and arranged in such a way that they engage with each other in order to transport a medium. The driven part (18) is loaded in the direction of the drive part (17) and the driven part (18) is arranged on the bearing bush (24) at a corresponding angle in relation to the drive part (17).
