Abstract (en)

[origin: WO2005031313A1] The invention relates to a device for automatically carrying out laboratory procedure steps on cell or tissue samples, comprising a number of modular stations, each of which carries out at least one procedure step, in a combined sequence of procedure steps and at least one support unit for the transport of sample containers to and between said stations. The device comprises at least one station from the automatic exchange of liquid media in the sample containers.
