Abstract (en)
[origin: US2007028428A1] A securement device for a bracelet includes a first attachment (2) and a second attachment (3) adapted to receive a bracelet pin (8). At least one of the attachments (2, 3) includes an axle (22, 32) substantially parallel to the pin (8), this axle (22, 32) being adapted to be disposed slidably in a transverse bore (10) of a body (1) that receives bracelets. Moreover, the device includes a locking element (4) disposed in a hole (12) in the body (1) intersecting the transverse bore (10) so as to coact with at least one axle (22, 32) of the attachments (2, 3) in a way to permit the locking and unlocking of at least one of these attachments (2, 3) in their recess.
