Abstract (en)

[origin: FR2859816A1] The device has an actuator (31) equipped with a spindle. A handle (311) includes a state indicator which is visible from a case in a neutral position of the handle and covered by the case in all positions of the handle. A sliding nut (32) adapts a position between active position and an intermediate position, lying between active and inactive positions, when a connecting rod is in engaged configuration.
