Abstract (en)
[origin: US2007063586A1] A device for establishing an electrical connection between two parts, in particular vehicle parts, which can move such that they can pivot with respect to one another about an axis, a first part (3) being provided with a current transmitter unit (1), and a second part (4) being provided with a current receiver unit (2), the current transmitter unit (1) and the current receiver unit (2) each being arranged in the region of the axis (5) such that the current receiver unit (2) and the current transmitter unit (1) come into contact with one another at least in an end position of the pivoting movement of the parts (3, 4).
