Abstract (en)

[origin: WO2005031995A1] A method and apparatus for providing a text message includes receiving an utterance (Step 210) at an input of an electronic device (100). Speech recognition is then performed on the utterance (Step 230) guided by user-defined message templates stored in a memory (155) associated with the electronic device (100). Speech recognition is defined by matching the utterance with one of the templates to create a matching template. A text message is then provided from the matching template (Step 235).
