Abstract (en)

[origin: WO2005027549A1] The invention relates to a circuit arrangement that acts as an interface between a SIM card (1) and a GSM modem (2), said arrangement comprising a bi-directional data line (5) that connects a card data input or output of the SIM card (1) to a modem data input or output of the GSM modem (2). The data line (5) is coupled to at least one edge driver (12, 13).
