Abstract (en)

[origin: WO2005032192A1] The invention relates to a method for transmitting control data via a physical channel, for example the so-called "layer 1" in the UMTS standard, between a mobile radio device and a base station of a cellular network for controlling a packet-oriented data transmission between the mobile radio device and the base station. Said control data comprise a packet number for identifying a data packet. Said packet number is source-encoded together with at least one additional control parameter for data transmission. The invention also relates to a mobile radio device and a base station adapted to the inventive method.
