Abstract (en)
A suction hose assembly for drawing in air laden with dust and/or foreign substance in a room and a vacuum cleaner having the same are provided. The suction hose assembly comprises: a flexible hose (103) connected to an inlet of the cleaner body; an operation handle (104) having a first cylinder (106) through which air is flowed; and a rotating connector (110) having one end connected to the flexible hose to communicate with the flexible hose, and the other end rotatably supported on an outer circumferential surface of the first cylinder (106) and communicating with the first cylinder. The flexible hose (103) is rotatably connected with respect to the operation handle, thereby easily managing and using the operation handle (104), and preventing the flexible hose from being twisted or wrenched.
