Abstract (en)

The container has four foldable posts (3, 3') mounted at corners of a base (2) and associated to an automatic locking device in a raised position. An operating unit (8) liberates simultaneously the device from the posts. A plane carrying structure (6) of a support surface has ends (6', 6'') connected to the posts in an articulated manner to support the ends and to control descent of the ends towards the base when the posts are folded.
