Abstract (en)

[origin: EP1666407A1] A column (4) for a fuel pump unit (1), comprises a top part (13), a rear part (14), a front part (5) and two sides (11) extending between the rear part (14) and the front part (5). A hose (6) is attached to the top part (13) and is at least partly stored in the column (4) in a rest position for the hose. The front part (5) has an opening (7), through which a portion of the hose (6) is arranged to hang, from the top part (5) of the column (4), in a rest position of the hose (6), and through which it is possible to pull out more of the hose (4) from the column (4) when the hose (6) is moved from the rest position to a use position. The sides (11) has side portions (10) next to the opening (7) and at least one cut out portion (12) is provided in at least one of the side portions (10). The cut out portion (12) allows the hose (4), in the rest position, to hang from the top part (13) of the column (4), such that at least part of the hose, comprised in said portion of the hose, extends slightly towards and outside the side of the column (4).
