Abstract (en)

[origin: EP1666688A2] The hinge has a pin (7) to connect a frame part (1) and a blade part, in which a longitudinal axis of the pin defines a hinge axis. The pin is stored within an opening of hinge portions (8) of the frame part and the blade part. Toothing in an outer periphery of the pin contacts the toothing in longitudinal walls of the opening such that a shifting unit and a fixing unit for the pin are accessed from both ends of the pin.
