Abstract (en)

[origin: EP1666691A2] The door leaf (3) has a length adjusting device (9) for adjusting a length (L) of the leaf. The adjusting device extends a door leaf-broad side, and includes an adjusting element that is attachable to a door-leaf main body in a telescopically movable manner. The adjusting device is adjustable in a vertical direction to adjust a height of a door leaf lower edge, and is firmly fixed to selectively adjust a position of the lower edge relative to the body. An auxiliary profile element forms a bottom portion of one of the broad sides, and is adapted to a profile of a lower side of the body.
