Abstract (en)
[origin: FR2859363A1] The combined seat and bed consists of a frame (1) in two hinged sections (2, 2') that pivot about a transverse axle (3). At least one frame section forms a cavity with upper (7, 7'), lower (8, 8'), side (2a, 2b, 2a') and transverse (10, 10') walls making a storage compartment for toys or necessary articles. The seat surface (4) is in the form of a supple envelope fitted to the frame and forming a cover for at least one of the compartments. Variants of the design can have a carrying handle or compartments that can be detached for use as a shoulder bag or a pouch for carrying baby.
