Abstract (en)
[origin: WO2005030067A1] The invention relates to a damping element (1) which dynamically stabilises two bones, in particular two adjacent vertebral bodies, is provided with a central axis (11) and comprises: A) first and second ends (12, 13) cutting said central axis (11) and a flexible element (10) which is arranged therebetween and coaxial with the central axis (11), wherein B) at least one end (12, 13) of said flexible element (10) comprises a ball joint (20) which is movably blockable by clamp means (40).
