Abstract (en)
[origin: EP1520665A1] The device has an electrical motor (10) moving a bread driving unit (7) in translation, transversal to a set of blades (8), between a backward position in which the bread (4) is loaded in the device and a forward position in which the sliced bread is removed from the device. A regulation unit (14) automatically adjusts power supplied by the motor based on a speed/acceleration of the unit, during cutting operation.
