Abstract (en)
[origin: WO2004108536A1] The invention relates to a method for filling sacks (58), comprising a device having a number of gripper tong pairs (44, 57, 76, 80), of which at least two gripper tong pairs (76, 80), during the filling process, touch the sack to be filled, and comprising a control device that controls the filling and conveying process of the sacks. The control device (76) of the at least two gripper tong pairs (76, 80), which, during the filling process, touch the sack to be filled, controls in such a manner that the at least one gripper tong pair (78) permits the sack material to be guided through the tongs thereof within at least one period of time during the filling process.
