Abstract (en)

[origin: WO2005028316A3] A hollow pill dispenser (1) has a mouth (9) at one end to slidably receive a blister strip (7) so that the blister strip (7) is substantially contained within the dispenser (1). The dispenser (1) is provided with engagement means (17, 29) which directly engages a formation (23) provided on the blister strip (7) to retain the blister strip (7) within the dispenser (1). The dispenser (1) further comprises release means (15, 16, 29) operative to release the engagement between the formation (23) and the engagement means (17, 29) so that the blister strip (7) can be pulled from the dispenser (1) through the mouth (9) of the dispenser (1) to expose a predetermined number of pills, the engagement means (17, 29), when the predetermined number of pills are exposed, directly engaging another formation (23) of the blister strip (7) to resist further pills being exposed.
