Abstract (en)

[origin: WO2005034236A1] The invention relates to a cooling body for electric and/or electronic components, in particular printed circuit boards. The cooling body consists of a chemically uniform material, whose exterior is cross-linked and which is thus poorly or non-adhesive and whose interior can be plastically deformed and thus adapted to the contours of the components or printed circuit boards. The cooling body can be cured by thermal post-cross-linking.
