Abstract (en)

[origin: EP1669003A2] The device has an opening (20) surrounded by a concave support surface (30) which is supported on an eyelid and is delimited by an upper edge (16) of a neck (15). The edge has a tangent, at the level of a hollow portion, making an angle greater than 45 degrees with a longitudinal axis of the neck. The neck emerges through the opening to apply an eyeliner composition in the form of a line determined by the shape of the opening. An independent claim is also included for a method for make-up of an eyelid.
