Abstract (en)
This invention has as the main objective to provide the user (and eventually to his partner) an additional stimulus (to their genital areas) during sexual intercourse. So, a common condom is transformed into a vibratory condom. It has an annular form so as to fit the penis. It is designed to be used in contact with a condom, so as to make it also vibrate, and transmit the vibrations to the penis and erogenous zones of both members of the couple during sexual intercourse. It has a salient part where the battery that feeds a vibratory machine is placed, that makes the whole ring vibrate. The switch is also placed in this area. The vibrations generated can be transmitted to the condom (and to the penis inside it). It is very easy to use. We only have to place the vibratory device around the condom (with the penis inside it), fit it, switch it on and it will begin to work.
