Abstract (en)

System for implementing a game of chance over a communications network, which stores the actions developed in said game and guarantees to players of said game that it has been implemented honestly and impartially. Said system for implementing a game of chance over a communications network allows at least one Audit Authority to check that said actions taken during said game have been honest and have not been manipulated. The recommended system comprises an Activity Register (115) which stores said actions taken in said game, linked together securely, and a set of programs and/or implementing platforms forming a Player Agent (101) through which at least one of said players participates in said game. According to a preferred embodiment of the invention said system comprises a set of programs and/or implementing platforms forming an Access Control Agent (105) which allows an Access Control Authority to authenticate said players by means of credentials.
