Abstract (en)

[origin: EP1669483A1] A method for adjusting a pile-warp tension in a pile loom (1) that forms the pile by changing a relative position between a beat-up position and a cloth-fell position, the method includes the steps of setting a loosening amount by which pile warp yarns (2) are to be loosened if the pile loom (1) stops while a pile structure is being woven, the loosening amount being set for each cause of stoppage and, when the pile loom (1) stops while the pile structure is being woven, loosening the pile warp yarns (2) on the basis of the loosening amount corresponding to the cause of stoppage and setting the pile-warp tension to a value lower than the pile-warp tension applied while the pile structure is being woven.
