Abstract (en)

The present invention relates to a device in connection with a protection for through-cutting, to prevent the cutting through of an anti-theft protection, which device comprises an elongated casing unit (1) inside which a protective device (2, 3) is arranged, which protective device (2, 3) comprises at least one member (2) arranged before final cutting through to give rise to a pinching force that prevents continued cutting through of the casing unit (1), said member (2) being formed as an elongated rod-shaped unit resiliently biased inside said casing (1) by means of at least one resilient member (3) arranged inside said casing (1) and arranged by one of its ends to exert a compressive force on a section (20) of said rod-shaped member (2), said resilient member (3) being arranged to exert a compressive force by its other end, against an end section (4) of said casing unit (1), at least two members (2a, 2b, 2c) being arranged inside the casing (1), and the transversal shape and extension of the member(s) (2) being adapted to the shape of the casing such that one end of a member that has been cut off can not be led past the other end.
