Abstract (en)  
[origin: EP1669689A2] Heat exchanger comprises deviating elements (4) for deviating a flow arranged in deviating zones of a water channel (1) which is spaced from the channel wall (3). The deviating elements extend over the whole length of one deviating zone and correspond with the contour of the channel wall. Preferred Features: At least two curved deviating elements are provided over the whole length of one deviating zone and are spaced on the extended axis of the separating wall (2) and/or on the extended axis of an opening (5) in the external channel wall.
