Abstract (en)  
[origin: WO2005023060A1] There is disclosed a modular bracket system for attachment to shelf edges, for example on gondolas in retail premises. The bracket includes adjustable quick fit locking means that can grip a wide variety of different shelf edge profiles, and may be used with various accessory components that are slidably received in elongate sections of the bracket. The accessory components include lighting systems, jump shelves, display panels, shelf dividers, tester shelves and others. The system of the present invention is more versatile and easier to install than existing shelf edge bracket systems.
