Abstract (en)

[origin: WO2005025689A1] The invention relates to a treatment apparatus of the sliding surface of sports gear comprising at least one treatment web (1), which is arranged to pass from a web roll (2) into a removal space (5) via a first guide surface (3) and a second guide surface (4), and a heating element (6) disposed between the first and second guide surface at a distance from the treatment web. According to the invention, the treatment apparatus includes at least one means (7, 8, 17) for contacting the treatment web (1) with the heating element (6) by moving the guide surfaces (3, 4) with respect to the heating element (6) and/or by moving the heating element (6) with respect to the treatment, web (1); and the heating element (6) includes elasticity (13) so that the heating element follows the sliding surface being treated uniformly and substantially with a standard pressure.
