Abstract (en)

[origin: WO2005087596A1] The invention relates to a method for packing elongated goods (12), such as extrusion profiles, preferably directly once the goods have been removed from a production machine, using a packing material such as a film or paper web (3'). The aim of the invention is to be able to temporarily and economically pack elongated goods. To this end, the packing material (3') is supplied transversally to the longitudinal extension of the elongated product (12), the elongated product (12) is inserted from above into a loop (S), opposing ends (3", 3") of the loop (S) are displaced in relation to each other, the packing material is cut on the supply side of the loop, and the loop ends (3", 3") are interconnected in order to secure the elongated product.
