Abstract (en)  
[origin: WO2005030598A1] A container of a collapsible type for liquid contents, comprising a compartment (4) which is defined by two opposite side walls (2) and a bottom wall (3) and whose volume depends on the relative position of the walls (2, 3). The container comprises a product-enclosing portion (19) which is formed by said walls (2, 3) and which in a filled state of the container extends from said bottom wall (3) to a surface level (20) of the contents held in the container. The product-enclosing portion (19) is arranged to be expanded by said contents to essentially assume the shape of a truncated cone (21) with its narrow end facing away from said bottom wall (3).
