Abstract (en)

[origin: WO2005035382A1] The invention relates to film packed agent portions, in particular washing, cleaning and/or care products comprising at least one compartment for receiving an agent, at least one film of said agent portion being plastically deformable in order to receive the agent. The disintegration and/or dissolving periods of the inventive firm package measured in distilled water at a temperature of 10 DEG C are less than said periods for a film package made, for example of a Mono-Sol-M-8630 or a equivalent film measured at the same conditions. The improved disintegration and/or dissolving periods are probably due to a surface structure and/or small holes whose diameter ranges from 1 μ m to 50 μ m.
