Abstract (en)
[origin: WO2005030666A2] A process for the production of laminated kiln-fused glass comprising (a) applying a first bonding agent to a surface of the kiln-fused glass (b) allowing the first bonding agent to disperse over the surface of the kiln-fused glass so as to form an even surface over the kiln-fused glass; and (c) applying a support material to the even surface of the first bonding agent. The bonding agent may be applied as a series of coatings or alternatively with the help of a reservoir formed on the surface of the glass.
