Abstract (en)
[origin: WO2005031215A1] The invention relates to a gas cooking surface comprising at least one gas burner (1) and a control device (21) for adjusting the heating capacity stages. Said gas burner operates depending on the heating capacity stage adjusted in a continuous mode (I) in which the gas burner (1) is continuously supplied with gas, or in a clocked mode in which the gas burner (1) is supplied with gas in an intermittent manner. In order to allow for a user-friendly handling of the cooking surface, the control (21), for adjusting the desired heating capacity stage, is provided with at least one touch contact (37, 39) that switches, irrespective of the mode of operation (I, II), between the different heating capacity stages when actuated by the user.
