Abstract (en)

[origin: WO2005026864A2] The invention relates to a system and method for tracking compliance of a company against a regulatory requirement. The system includes a database, an administrative module, a user entry module, a database access module, a question module, an evaluation module and a report module. The database contains records relating to the company, question information relating to the requirement, answer information and user information. The administrative module provides the company's administrative data to the database. The user entry module provides the user data to the database. The database access module determines relevant questions for the user after accessing the database. The question module provides questions to the user, accepts answers to the questions and stores the answers in the database. The evaluation module evaluates compliance by the company to the requirement after it evaluates records in the database. The report module generates a report of regulatory compliance of the company.
