Abstract (en)  
The applicator has a support (2) with a side (3) on which an elastically deformable application unit (4) is fixed. The support has a preferential folding axle (9) such that, in response to a folding stress exerted on the support, the unit is deformed to modify transversal curvature of an application surface (7), of the unit, observed transversal to the axle and longitudinal curvature of the surface observed axially along the axle. Independent claims are also included for the following: (A) a method for fabricating an applicator (B) utilization of an applicator for applying a makeup removal composition to remove makeup from face.
