Abstract (en)

[origin: EP1671885A1] A feeder (1) for feeding a product (P), adapted to be arranged in line with a rotary folding star conveyor (5) of packaging machines (2), the packaging machines (2) generally comprising a feeder (1) for the products (P) to be packaged, a controlled unit (3) for distributing the sheet (4) with which each product (P) will be packaged, a unit (13) for inserting the product (P) and the respective packaging sheet (4) in the grip element (7) arranged at the end of the arm (6) of a rotating packaging star conveyor (5). The feeder (1) according to the invention comprises at least one unit (8) for conveying the products (P), which is arranged substantially at right angles to a pivoting axis (9) of the star conveyor (5) and is aligned with the distribution unit (3) of the packaging sheet (4) and also comprises, at the end portion of the at least one unit (8), a rotating element (10) which, by means of its own oscillating motion, transfers each product (P) onto the element of an insertion unit (13) where the product (P) receives from the distribution unit (3) the sheet (4) before being inserted in the grip element (7) of the arm (6) of the rotating star conveyor (5) that passes at the insertion position.
