Abstract (en)
The invention concerns a closure device for a squeezable container, said device having a cap body (11) adapted to be secured to the neck of the container and a valve portion formed of a membrane (12) having at least two juxtaposed flexible flaps (23) facing the discharge orifice of the container. The closure device of the invention is characterised in that the cap body (11) and the valve portion (12) are made in a single piece out of at least one material capable of being injection moulded, said material having a modulus of elasticity higher than 100 N/mm²
