Abstract (en)
Container (1) for waste, comprising a casing (2) having a coupling device (3) which, when it travels along a preset path (A), causes the parts (4f) forming the base (4) of said casing (2) to open or close, said coupling device (3) being connected to said base (4) by means of connection and transmission members (6,7,8) forming a kinematic chain (5). In the container (1) of the invention, a step-up device (9) capable of reducing to a preset extent the length of said path (A) required to cause the parts (4f) forming said base (4) to open or close completely, is installed in said kinematic chain (5).
