Abstract (en)

A spacer for mounting a deck ledger board to a building surface includes a spacer portion having a first panel adapted to engage a building surface and a second panel connected to and spaced from said first panel by a selected distance. A ledger board retainer is connected to the spacer portion and defines therewith a generally U-shaped region for receiving a ledger board therein in close juxtaposition to the spacer portion. The spacer ensures proper drainage of moisture from regions between the ledger board and the building surface.
