Abstract (en)

[origin: EP1672269A1] The installation has a pump (8) immersed in a tank (2) and connected to an input of an evaporator (9) whose output is connected to a feed manifold (7) of an energy production unit (1) via a supply conduit (10). The pump supplies liquefied gas with a pressure greater than the supply pressure of the energy production unit, to the evaporator. A control valve of the conduit controls the gas flow to the feed manifold.
