Abstract (en)

[origin: EP1672657A2] The apparatus (1) has a case (2) with a hooking mechanism including a pin connected to a pusher (3) and cooperating with a cam channel. The pin is displaced between an initial position and an initial displaced position while the pusher is in a deployed position, so that the pin passes through a return section of the channel when a selector (4) is in a position corresponding to a monostable configuration of the apparatus.
