Abstract (en)

[origin: DE10346213A1] The method is applied to a vehicle with a hybrid drive, especially a motor vehicle with an internal combustion engine and at least one electrical machine coupled or able to be coupled to the drive train of the vehicle and involves regulating the state of charge of the energy storage device (28) depending on the vehicle's driving speed. A desired value for the state of charge is reduced with increasing speed of travel. An independent claim is also included for a vehicle with a hybrid drive, especially a motor vehicle.
