Abstract (en)
[origin: WO2005035915A1] The invention relates to an electronic key (1) for a locking system of a motor vehicle, comprising a plastic housing part (2) that is provided with at least two actuating elements (3, 3') for one respective electrical switch on the same side. The invention is characterized in that the housing part (2) encompasses a field (4) which cannot be actuated, is at least slightly raised or lowered in relation to the actuating elements (3, 3'), and forms a palpable separation between the at least two actuating elements (3, 3').
