Abstract (en)
[origin: WO2005010925A2] The invention relates to a sensor module, in particular, a sensor (2), for determining measurement data, and a circuit arrangement (3) which enables a wireless power supply and retrieval of the measurement data. The sensor and the circuit arrangement are respectively embodied as a sensor (2) capable of integration and as an integrated semiconductor circuit module (3), whereby the sensor (2) and the semiconductor circuit module (3) are connected to each other with microsystem means, in a mechanical and electroconductive manner, to form an integrated sensor chip unit (1).
