Abstract (en)

[origin: EP1524872A1] The position determination method uses checking of the position determination (POSPLMN) for the mobile subscriber (MS) provided within the radio communications system (PLMN) using an independent position determination (POSDGPS) effected via a device at the mobile station location (CONTROL LAPTOP), receiving the position determination provided within the communications system via a remote device (REMOTE LAPTOP) . An independent claim for a device for position determination of a mobile subscriber with checking of a position determination provided within a radio communications system is also included.
